

PROVEN EUROPEAN TECHNOLOGY

LestaUSA brings proven European technology to the United States for manufacturers that would otherwise find the barrier to robotic finishing too difficult.

Lesta Srl is a dynamic company built by the strong will of its founders who, together with its collaborators, have brought a way to make industrial painting robotics more accessible to manufacturers of all sizes for finishing parts and components made from metal, wood, plastic, ceramics and composites.

Located in northwest Italy near Milan, Lesta Srl is a key player in the industrial robotics market for finishing, and is considered a system integrator in the field of industrial automation, providing turnkey solutions to customers with over 300 Lesta robots in use. Lesta Srl actively pursues growth into international markets.

Some team members have been working with self-learning technology for over 30 years, using that knowledge to build Lesta's unique technology from the ground up.

THE FOUNDING MEMBERS OF LESTA

Emanuele Mazza, Marco Bresciani, Federico Comini

“Our expansion into North America and our partnership with LestaUSA was 2 years in the making. Now, we can help U.S. manufacturers gain efficiencies and peace of mind with our technology.” - Emanuele Mazza

The Meaning of Lesta

Lesta is Italian for “quick.” Because of its simplicity, LestaUSA robotic finishing technology is operational in a much shorter time frame than traditional robotics.

Simplicity has a place in Lesta's history. In its current logo, the dots and lines to the left of the name spell L-E-S-T-A in Morse code to represent technology with a long tradition and easy application.
