Derek DeGeest President, LestaUSA

Successful painting automation needs software integration for simple spray controls to fine tune the program and adjust for day-to-day variables. Lesta software gives your painter the tools to control the robotic system's painting parameters, recipes and quality. A perfected balance of robot and painter.

LestaUSA is about working together to provide turn-key robotic solutions. This technology addresses the struggles everyone has and will improve the finishing industry for U.S. manufacturers by breaking down the barriers of automating complex parts. LestaUSA builds, integrates and supports its finishing technology right here in the U.S.

Finishing automation isn't new, but the ability to have robots complete the work without complicated programming or teach pendants in North America is. Lesta robotic solutions are innovative and promise to change the way finishing is done.

Emanuele Mazza Co-Founder, Lesta Srl

There are currently over 500 Lesta robots in use across the globe. This is proven technology now being made available in the United States. Lesta's decades of dedication to automating solutions for the finishing industry has created proven solutions for every type of wood production.

It doesn't matter if you're a custom paint shop doing small jobs or a large manufacturer finishing large components, Lesta robotic technology saves time and frees up staff for other important jobs.

Lesta robots are designed from the ground up for liquid, powder and fiberglass applications for metal, wood, plastic, ceramics and composite material. They are easy to use and will shave time off any manufacturers finishing process.

See it in action at FABTECH Booth D45368

Media Briefing + Product Demonstrations
Monday, September 13 from 11:00am to 11:30am
Media interviews available September 13-16
Press Kit available online at LestaUSA.com/Media

HEAR OUR PODCAST
EPISODES ON :

Manufacturing a Stronger Standard

LestaUSA and DeGeest Corporation president, Derek DeGeest, along with special guests, educate and inspire manufacturers through the robotics and automation movement by sharing topics on automated solutions for general industry and upskilling your workforce.
