

Equalum provides world-class data ingestion solutions for Oracle customers looking to modernize their data infrastructure. Equalum's CDC and ETL solutions integrates with Oracle Cloud Infrastructure to enable customers that are transitioning to Oracle Cloud, building out modern Data Lakes, or are incorporating AI/ML into their applications to provide world-class performance along with self-service configurability and zero coding.

The **Global Oracle Solutions Center (OSC)** delivers high value solutions and services to customers, through Oracle and Partner technologies by solving their business-technical needs.

Global Oracle Solutions Center

OSC provides a wide range of services such as Architecture Review, TCO/ROI analysis, Proof-of-Concepts, Custom Demos and Workshops to support Equalum's Data ingestion platform. Test your Equalum CDC and Data Workloads with the latest Oracle technologies and hosted in the state-of-the-art technology data centers assisted by Oracle SMEs and Solution Architects today.

Sales Support

Oracle's Global Solution Center provides world-class services and support to your PoC. Oracle Solution Center provides leading-edge 'Test Before You Invest' infrastructure solutions for Equalum's Data ingestion platform.

Solution Architecture

Oracle's Subject Matter Experts (SMEs) and Solution Architects in concert with Equalum Architects, will assist with industry best practices, scalable Architectures, POCs and Demos.

✓ VALUE

Provides a one-stop-shopping experience for all of your Oracle and Equalum software Architecture, POC or Demos hosted within Oracle's Global Solution Center.

✓ VALUE

Together, Oracle and Equalum provide breakthrough solutions by providing change data capture and real-time data workloads for your most demanding data ingestion requirements.

✓ VALUE

Together, our joint team will work with you to understand your core requirements and how to achieve best-in-class data ingestion objectives for your project while maximizing your overall investment.

CASE STUDY | Equalum and Oracle Technology in Action

A **Top 5 Pharmaceutical** company is running clinical trials for COVID-19 involving dozens, even hundreds, of upstream and downstream systems each with its own system and data stores. Equalum was brought in to **streamline and speed up integration** between these systems replacing cumbersome batch ETL jobs and frameworks that used to take days to execute. **Actionable insights** from data now comes in **real-time** within seconds using **zero-coding integration pipelines**. No changes to systems were necessary either as a result of Equalum's **non-intrusive CDC framework**.

Equalum's platform is **modernizing their clinical workflow** to expedite new **drugs to market much faster**.
