

PAYMENT APPLICATION AS SERVICE

Do you have the need to enable amazing features within your payment terminals? Then PAaS is what you are looking for.

Pure innovation powered by your demands.

So, you want to expand the payment experience. Maybe you have an offering that is perfect for grab and pay. You run a business that has a need for next-generation features, but you can't wait. Loyalty programs, pay-and-go, information is just a few examples of what you can do. Short story: add whatever you want before or after the actual payment.

With PAaS you can, thanks to our solution add a layer of features on top of our state of the art payment solution. Powered by Android and a setup, any engineer would be proud of, make our solution an art in itself. The best part is that you can do this on your own. No dependencies from us. Only freedom.

You are in controll

Thanks to our solution, you are in control. In other words, if you can think about it, you can do it. The only thing we protect, for your sake, is the actual payment situation. Not only do you want a situation that comes without error, but you also want to stay compliant and, without effort, follow all regulations that we associate with payments.

In other words: we take care of everything that is boring, so you can focus on what's relevant – your customer.

Lets get technical

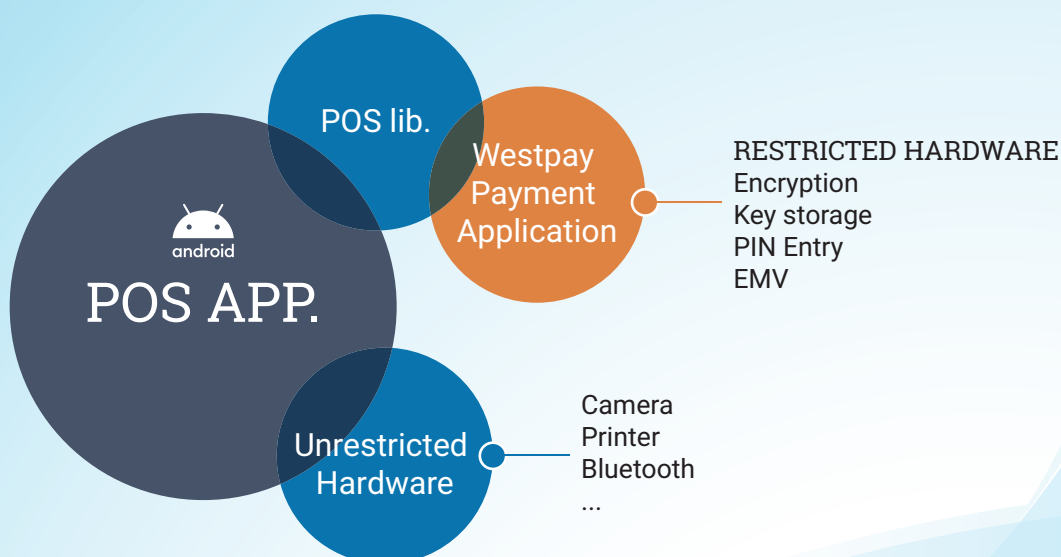

PAaS runs thanks to Android OS. That means that Android itself only limits the innovation and permission set-up. A showstopper? Nope, Android enables us big time.

Ask your developer and they will confirm.

*Questions? No worries.
Give us a call, and we will
answer any questions.*

PAYMENT APPLICATION AS SERVICE

With PAaS you no longer are depending on third-party. From now on it is your roadmap, time line and vision.

Highlights

- Fully customizable POS solution tightly integrated with the Payment Application via the POS Lib and Android Intents
- Allows the customer to freely implement their own functionality outside of the card payment scope.
- Work outside of the PCI Scope
- Quick and smooth development process without code reviews.
- Develop in your preferred language supported by Android.

Westpay Carbon SDK

- Fully functioning POS App with basic features
- Starting point to speed up customer development
- Documented source code
- Access to development website with examples and information

Westpay Payment Application

Contains the core payment application, WestInt Transaction Engine.

Holds strategical functions and payment options that should be enabled on all protocols.

Certified by PCI under PCI PA-DSS.

Approved by PAN-Nordic and BCA Sec.

EMV L1 and EMV L2, Visa Paywave and Mastercard PayPass.

Controls application and parameter updates.

Restricts access to sensitive parts of the terminal (EPP).
