### SANDPIPER Releases New FDA Compliant AODD Pumps

Mansfield, OH (December 2020) – SANDPIPER, a global leader of air-operated double-diaphragm (AODD) pumps, is releasing a new line of FDA compliant pumps. The F-Series pumps feature clamp-band construction for applications requiring frequent cleaning.

SANDPIPER has a strong history in sanitary and hygienic applications, with SANDPIPER AODD pumps being used for over 40 years in the production of food, beverage, dairy, personal care products and pharmaceuticals to name a few.

“2020 has certainly put a strain on sanitary and hygienic applications, as so many manufacturers are essential,” noted John Wawrowski, Business Development Leader. “Our F-Series pumps continue to support these manufacturers by providing readily available, safe and efficient pumping technology to increase production and decrease downtime.”

Common applications for the F-Series FDA compliant pumps include ingredient injection, product transfer, blending and mixing, filling lines, winery pump-overs and chocolate production.

The F-Series boasts features necessary for the production of food and other sanitary products. Pumps are electropolished 316 stainless steel wetted sections for reduced product adhesion. They also feature nickel-plated aluminum non-wetted sections for compatibility with washdown chemicals (polypropylene or stainless steel available on some models).

F-Series pumps are constructed from FDA compliant materials with most models also EC1935/2004 certified for food contact materials and feature sanitary clamp connections. The F-Series pumps are available in a range of sizes from ½” – 3” (15mm – 80mm).

For more information about the F-Series products, visit [www.sandpiperpump.com/markets/sanitary](http://www.sandpiperpump.com/markets/sanitary).

SANDPIPER pumps are manufactured by Warren Rupp, a business unit of IDEX Corporation. With over 55 years of trusted solutions expertise, SANDPIPER delivers best-in-class pumping and engineering innovations for the world’s most difficult and demanding pumping challenges.
