## Supported Mails

Outlook

Thunderbird

Apple Mail

Lotus Notes

Mulberry Mail

Zimbra

G-Suite

Cpanel

Plesk

Microsoft Outlook

## Secure Email - Digitally Sign & Encrypt Emails

GlobalSign PersonalSign Certificates use S/MIME technology to allow users to digitally sign and encrypt email.

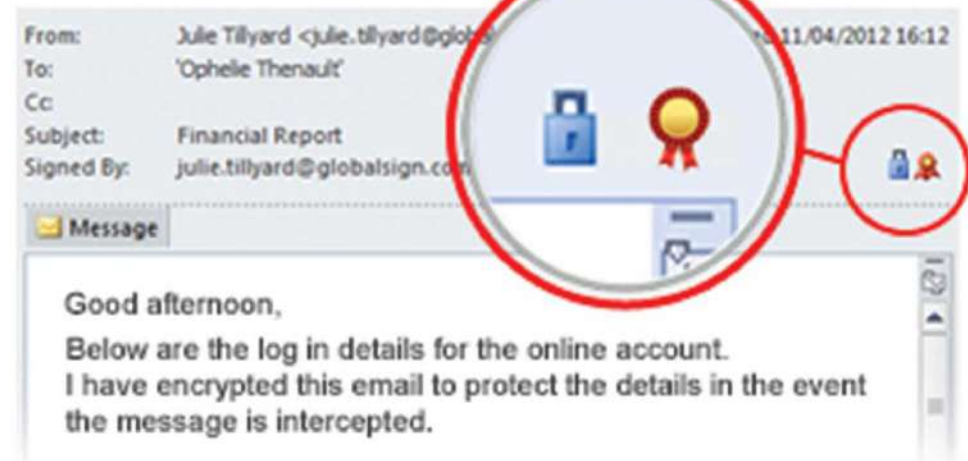

**Digitally signing an email proves** authorship and prevents tampering, assuring the email recipient that the email came from you, not an imposter, and that the content of the email has not been altered in transit.

**Encrypting email** ensures message privacy and keeps sensitive information from falling into the wrong hands. With S/MIME encryption, only the intended recipient can access email contents.

Digitally Signed Email:

Proves authorship & prevents tampering

Encrypted Email:

Ensures message privacy
