XcellSecure | E-mail Security Certificates

Supported Mails

| Microsoft Outlook | Thunderbird | Apple Mail | Lotus Notes | Mulberry Mail | Zimbra | G-Suite | Cpanel | Plesk |

## Secure Email - Digitally Sign & Encrypt Emails

GlobalSign PersonalSign Certificates use S/MIME technology to allow users to digitally sign and encrypt email.

Digitally signing an email proves authorship and prevents tampering, assuring the email recipient that the email came from you, not an imposter, and that the content of the email has not been altered in transit.

Encrypting email ensures message privacy and keeps sensitive information from falling into the wrong hands. With S/MIME encryption, only the intended recipient can access email contents.
