

FAQ

If you are looking for quick answers to the most important questions about our services, our FAQs are here to help. In this short collection, we answer the most common questions.

Why should you choose iVE.ONE?

- **Technology**

Our state-of-the-art technology enables you to raise capital, optimize existing processes and access the digital future of capital markets. iVE.ONE started as a tokenization platform in 2017. Today, we focus not only on Security Token Offering (STO), but also offer various other products, such as investment in digital and crypto assets like NFTs, STOs and crypto-assets.

- **Always there for you**

We know how important and time-consuming the process of raising capital is. Our team of experts guides you through all the stages of issuance and investment, as well as takes care of the technical implementation. The iVE.ONE platform is available 24/7/365 and our digital marketplace is never closed.

- **Proven track record**

of tokenization with use cases in various industries - from asset management firms to real estate and logistics. Talk to us to learn more about use cases we have done.

Does iVE.ONE have an existing investor network?

Yes, we have an investor network of professional and retail investors and are constantly looking to expand it with new partners. However, our main focus lies in providing tech infrastructure and we encourage our customers to bring their own network of investors.

Can iVE.ONE raise the required amount?

Once tokenized, every project is offered to our investor network. Like with traditional capital raising, there is no guarantee to raise the required amount. You as the issuer are the decision-maker on soft and hard cap as well as the timeline for the project. The amount that can be raised always depends on the asset or project itself, the more lucrative the asset, the better the chances to raise the amount.

Does iVE.ONE have existing use cases?

Yes, iVE.ONE has existing use cases in various industries. While our focus lies in real estate tokenization as well as providing infrastructure for institutional investors, we have also done cases from other industries, such as logistics & supply chain, cloud commodities, art and other.

What is the difference between STO & ICO?

Initial Coin Offering was a popular strategy to raise the funds for blockchain projects before the rise of Security Token Offering. This is a means of crowdfunding technique through the creation of digital coins or tokens. ICOs are the typical fundraising strategy which is used by the start-ups to showcase their ideas for funds. ICOs can be subjected to manipulation because the market is not regulated.

Security Token Offering is a public offer of a security that is tokenized. It's an digital assets that could be used to divide significant assets into smaller assets. It makes it easier for an investor to have fractional ownership of the product. Having an advantage of regulations and laws, STO can be used for big, international projects. In contrast, crowdfunding returns are low and it doesn't really allow to build a diversified portfolio.
