

# Universal Remote Slate

## Start each guest stay with a clean slate

Designed specifically for hospitality and healthcare applications, Slate provides simple, yet effective control of guest-room entertainment systems while ensuring reliable performance and unit integrity. Slate is a fully cleanable remote control that can be wiped-down with common hospitality disinfectant cleaners or wipes before each new guest stay.

Designed with hospitality applications in mind, Slate also has features that greatly reduce in-facility support: it easy to use, efficient to setup, prevents battery theft, and has extra-long battery life.

### Fully cleanable and germ-fighting remote

- Remote has a smooth top-case with no key holes so it can easily be sprayed with a cleaner and then dried with a cloth or can be wiped-down with disinfectant wipes.
- Durable design allowing the remote to survive over three years with daily use of harsh cleaning products.
- Remote casing can have optional antimicrobial additives embedded so that the very parts of the remote fight germs and bacteria even while the remote is being used.

### Optional "Cleaned" belly band

Each Slate remote comes with one "Cleaned for your protection" belly band. Replacement belly bands can be purchased so the hotel property can apply a belly band to each remote prior to each new guest stay.

# Features

## Tool-less theft-resistant battery compartment for 2 AA size Batteries

- Battery door on the Slate remote is actually the full bottom case itself. There is a special “trick” technique to open the remote battery compartment that makes it very difficult for guests to open
- Prevents tampering or battery theft by any typical guest who is occupying the room, but still does not require a specialized tool. To the naked eye, it will appear as if the remote itself is sealed and has no battery door
- Battery compartment includes two AA size batteries for far longer battery life than most competing hotel remotes using AAA size batteries. This greatly reduces the amount of time and money the hotel spends on changing batteries

## Upgradability and learning capabilities

- Battery compartment also houses the 6-pin serial port that is used for upgrades and programming by hotel personnel using UEI’s EZ Updater tool. This allows each property to program one “Master” remote and then quickly clone all the other remotes for that location
- Remote is fully-learnable for up to 39 keys, compared to most learning remotes that limit the amount of keys

## Easy to use

- Easy-to-read key layout makes remote simple to use
- Device modeless operation eliminates mode confusion
- The ability to stand the remote upright makes it easy to locate and to notice for new guests entering the room

## Available configurations

The Slate remotes is available as:

- 1 Device
- 2 Device
- 2 Device Backlit
- Custom Design
