Vyopta for Google Meet

The only way to monitor, support, and optimize Google Meet experiences along with the entire UC estate in order to efficiently support the surge in remote collaboration.

Troubleshoot video and audio calls with an intuitive interface that helps IT teams detect, diagnose and resolve issues faster.

Gain richer insights by tracking key metrics simultaneously across Google Meet, video endpoints, plus other on-premises and UCaaS systems.

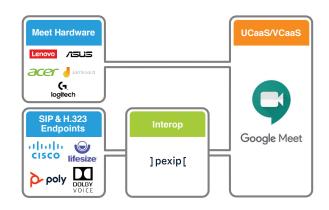

Gain insights to improve adoption, optimize costs, boost productivity, and train users, all while efficiently scaling IT to manage usage.

Vyopta's Collaboration Performance Management (CPM) platform helps UC and Service Desk teams by providing:

- · Years of data retention and out-of-the-box visualizations
- Ability to proactively identify & quickly troubleshoot issues
- Single-pane-of-glass to optimize mixed UC environments
- Intuitive, flexible, user-friendly workflow, dashboards for UC
- User tagging for customized, business-relevant reports

Vyopta helps to manage performance and adoption not only for Google Meet, but also across compatible video endpoints (such as Meet hardware), as well as other calling and conferencing technologies (including numerous on-premises and UCaaS platforms, and voice infrastructure). Vyopta's vendor-agnostic approach helps maintain visibility into usage, performance and quality of experience across departments, and more accurately identify possible root causes for known issues.

Vyopta offers the only purpose-built platform for UC monitoring and analytics with coverage of Google Meet.
