Unit Investment Trust Portfolio Analysis Report

Not FDIC Insured • Not Bank Guaranteed • May Lose Value

Important Investor Information

Asset allocation is the process of developing a diversified investment portfolio by combining different asset classes in varying proportions. Many financial experts agree that finding the right mix of investments is a key factor to successful investing. Because the prices of stocks and bonds often react differently to economic and market changes, diversifying your investment portfolio among stocks, bonds, and short-term investments or cash can expose your investments to additional opportunities that have the potential to enhance your returns and help reduce your overall investment risk.

Based on your goals, time frame, tolerance for risk, tax situation, and other factors, your investment professional can help you create a portfolio of investments that is in your best interest. By combining the various unit investment trusts which are presented in this report, investors can achieve diversification of their investment portfolio. As time passes, you and your investment professional will want to review the mix of your investments to ensure that it is still in your best interest. It is our intent that this report can be used to help with this review.

General Risk Considerations

There is no assurance an unmanaged unit investment trust will achieve its investment objective(s). An investment in a unit investment trust is subject to market risk. Market risk is the risk that a particular security owned by a trust may fall in value. Additionally, the value of the securities held by a trust may be subject to steep declines or increased volatility due to changes in performance or perception of the issuers.

See Additional Risk Considerations at the end of this report for risks specific to each trust included herein.

The information presented is not intended to constitute an investment recommendation for, or advice to, any specific person. By providing this information, First Trust is not undertaking to give advice in any fiduciary capacity within the meaning of ERISA, the Internal Revenue Code or any other regulatory framework. Financial professionals are responsible for evaluating investment risks independently and for exercising independent judgment in determining whether investments are appropriate for their clients.

You should consider a trust's investment objectives, risks, and charges and expenses carefully before investing. Contact your financial professional or call First Trust Portfolios L.P. at 1-800-621-1675 or visit www.ftportfolios.com to obtain a prospectus, which contains this and other information about a trust. Read it carefully before you invest.

Unit Investment Trust Potential Advantages

UITs enable investors to own a basket of securities with one single purchase, rather than trying to select individual securities that meet their objectives. UITs are designed to fill a variety of investment needs and risk tolerance levels and may be appropriate for a variety of reasons such as liquidity, and diversification.

UITs offer many features found in other packaged products but with two major differences – a defined portfolio and a defined horizon. Unlike actively managed funds that continually buy and sell securities, thereby changing their investment mix, the securities held in a UIT generally remain fixed until the trust terminates. Because the portfolio is fixed, UITs maintain a buy and hold discipline, encouraging investors to stay true to their investment strategy and avoid the pitfalls of emotional investing. This buy and hold approach, however, does not mean buy and ignore. Investors should meet with their financial professional periodically to evaluate investments and ensure that they are still in-line with goals.

Potential UIT Benefits

■ Fully Invested

A UIT holds limited cash positions so more of your money is invested.

■ Known Portfolio

The securities held in a UIT remain fixed, providing investors with complete transparency.

■ Daily Liquidity

Units may be redeemed on any business day at the redemption price, which may be more or less than the original purchase price.

■ Convenience

UITs allow investors to own a single investment which is diversified over multiple securities instead of buying individual stocks or bonds. Additionally, UITs have low minimum purchase requirements.

■ Reinvestment Options

Most UITs allow investors to elect to have distributions reinvested into additional units of the same trust. There are no sales charges incurred on units purchased through the reinvestment option.

UIT Comparison to Individual Securities and Mutual Funds

	Individual Securities	Mutual Funds	First Trust UITs
• Fully invested	■	Possible	■ ¹
• Known portfolio	■	Possible	■
• Daily liquidity	■	■	■ ¹

• Risks ⁴	■	■	■

1. Units may be redeemed on any business day at the redemption price which may be more or less than the original purchase price.

2. Only available for companies with dividend reinvestment plans.

3. There are costs associated with an investment in each type of security. Consult your brokerage firm and/or the security's prospectus (if applicable) for complete details.

4. Investing involves risk, including possible loss of principal. Please see Risk Considerations in the prospectus for risks specific to the unit investment trusts mentioned in this presentation.

Index Descriptions and Definition of Terms

An index is an unmanaged statistical composite used to provide a representation of the value of the securities which it tracks. An investor cannot invest directly in an index.

Standard & Poor's 500 Composite Stock Price Index

An unmanaged index comprised of 500 stocks chosen by Standard & Poor's to be representative of the leaders of various industries. This index is capitalization weighted. An investor cannot invest directly in the index.

Style Analysis

The style and capitalization characteristics used to describe the stocks held in the trusts contained in this report are designed to help you understand how the trusts fit into your overall investment plan. Due to changes in the value of the stocks, the characteristics may vary over time. In general, growth stocks have high relative price-to-book ratios while value stocks have low relative price-to-book ratios. In determining market capitalization characteristics, we analyze the market capitalizations of the 3,000 largest stocks in the U.S. (excluding foreign securities, ADRs, limited partnerships and regulated investment companies) on a monthly basis. Companies with market capitalizations among the largest 10% are considered Large-Cap securities, the next 20% are considered Mid-Cap securities and the remaining securities are considered Small-Cap securities.

Historical Distribution Analysis

Weighted Historical 12-Month Distribution Rate of Trust Holdings -
This analysis is a weighted figure and calculated from the Historical 12-Month Distribution Rate of Trust Holdings for each Trust selected. There is no guarantee the issuers of the securities included in the trust will declare dividends or distributions in the future. The historical 12-month distribution per unit and historical 12-month distribution rate of the securities included in the trust are for illustrative purposes only and are not indicative of the trust's distribution or distribution rate.
Due to the negative economic impact across many industries caused by the recent COVID-19 outbreak, certain issuers of the securities included in the trust may elect to reduce the amount of dividends and/or distributions paid in the future. As a result, the "Historical 12-Month Distribution Rate of Trust Holdings," which is based on the trailing twelve-month distributions paid by the securities included in a trust, will likely be higher, and in some cases significantly higher, than the actual distribution rate achieved by the trust. The historical 12-month distribution per unit is based on the weighted average of the trailing twelve month distributions paid by the securities included in the portfolio. The historical 12-month distribution rate is calculated by dividing the historical 12-month distributions by the trust's offering price. The historical 12-month distribution and rate are reduced to account for the effects of fees and expenses, which will be incurred when investing in a trust. Certain of the issuers may have reduced their dividends or distributions over the prior twelve months. The distribution per unit and rate paid by the trust may be higher or lower than the amount shown above due to certain factors that may include, but are not limited to, a change in the dividends or distributions paid by issuers, actual expenses incurred, or the sale of securities in the portfolio. For trusts that include funds, distributions may include realized short term capital gains, realized long-term capital gains and/or return of capital. PLEASE NOTE: For trusts that hold preferred securities, the historical distribution rate is calculated using only the holdings that have 12 months of distribution history. Any holdings without a 12 month history of dividends were excluded from the calculation.

Additional Risk Considerations

Equity Risk

The following trust(s) is associated with this risk: Brookmont Equity Dividend, 24; Virtual Economy, 1. An investment in a portfolio containing common stocks is subject to certain risks, such as an economic recession and the possible deterioration of either the financial condition of the issuers of the equity securities or the general condition of the stock market.

Sector Concentration Risk

The following trust(s) is associated with this risk: Brookmont Equity Dividend, 24; Virtual Economy, 1. A portfolio which is concentrated in an individual sector is subject to additional risks, including limited diversification.

Buy & Hold Risk – Taxable Trusts

The following trust(s) is associated with this risk: Virtual Economy, 1. This UIT is a buy and hold strategy and investors should consider their ability to hold the trust until maturity. There may be tax consequences unless units are purchased in an IRA or other qualified plan.

Consumer Products Risk

The following trust(s) is associated with this risk: Brookmont Equity Dividend, 24. The companies engaged in the consumer products sector are subject to global competition, changing government regulations and trade policies, currency fluctuations, and the financial and political risks inherent in producing products for foreign markets.

COVID-19 Economic Impact Risk

The following trust(s) is associated with this risk: Brookmont Equity Dividend, 24; Virtual Economy, 1. The recent outbreak of a respiratory disease designated as COVID-19 was first detected in China in December 2019. The global economic impact of the COVID-19 outbreak is impossible to predict but is expected to disrupt manufacturing, supply chains and sales in affected areas and negatively impact global economic growth prospects. The COVID-19 outbreak has also caused significant volatility and declines in global financial markets, which have caused losses for investors. The impact of the COVID-19 outbreak may be short term or may last for an extended period of time, and in either case could result in a substantial economic downturn or recession.

Foreign Securities Risk

The following trust(s) is associated with this risk: Brookmont Equity Dividend, 24; Virtual Economy, 1. An investment in securities of foreign issuers should be made with an understanding of the additional risks involved, such as currency fluctuations, political risk, withholding, the lack of adequate financial information, and exchange control restrictions impacting foreign issuers.

Large-Cap Risk

The following trust(s) is associated with this risk: Brookmont Equity Dividend, 24; Virtual Economy, 1. Large capitalization companies may grow at a slower rate than the overall market.

REITs Risk

The following trust(s) is associated with this risk: Virtual Economy, 1. An investment in a portfolio containing REIT securities is subject to additional risks including limited diversification. Companies involved in the real estate industry are subject to changes in the real estate market, vacancy rates and competition, volatile interest rates and economic recession.

Small-Cap and Mid-Cap Risk

The following trust(s) is associated with this risk: Brookmont Equity Dividend, 24; Virtual Economy, 1. An investment in a portfolio containing small-cap and mid-cap companies is subject to additional risks, as the share prices of small-cap companies and certain mid-cap companies are often more volatile than those of larger companies due to several factors, including limited trading volumes, products, financial resources, management inexperience and less publicly available information.

Technology Risk

The following trust(s) is associated with this risk: Virtual Economy, 1. The companies engaged in the information technology sector are subject to fierce competition, high research and development costs, and their products and services may be subject to rapid obsolescence. Technology company stocks, especially those which are Internet-related, may experience extreme price and volume fluctuations that are often unrelated to their operating performance.

Volatility Risk

The following trust(s) is associated with this risk: Virtual Economy, 1. The value of the securities held by the trust may be subject to steep declines or increased volatility due to changes in performance or perception of the issuers.

Operational Risk

The following trust(s) is associated with this risk: Brookmont Equity Dividend, 24; Virtual Economy, 1. As the use of Internet technology has become more prevalent in the course of business, the trust has become more susceptible to potential operational risks through breaches in cybersecurity.
