

Disaster Recovery as a Service

How Our Disaster Recovery Works

NuMSP Disaster Recovery backs up physical servers and virtual machines to a local appliance before it is replicated to the cloud. The cloud could be a private cloud, NuMSP's cloud or a popular third party cloud, such as Google Cloud Platform, Amazon AWS, Microsoft Azure or IBM Bluemix.

Key features of our Disaster Recovery

Protected Systems

NuMSP protects all of your data from physical and virtualize environments, Windows, Linux, Unix, VMware and Hyper-V.

15-Minute Failover Guarantee

We offer an industry-leading 15-minute SLA for failover and have an average recovery time of 70 seconds. Don't believe us? Check out our CloudBoot™ histogram.

Drag & Drop Orchestration

Use our drag-and-drop orchestration workflow editor to specify the order in which machines are recovered, create groups of machines to boot simultaneously, and specify time intervals between system boots to ensure a smooth system recovery.

Software-Defined Networking

NuMSP Disaster Recovery rebuilds your network automatically using software defined networking – effectively capturing a complete replica of your on-premise data center in the cloud.

DR Testing

With NuMSP, say goodbye to formal declarations of disasters. Now, you can test with impunity with push-button ease and unlimited DR testing.

Ransomware Mitigation

Don't pay the ransom. Quickly recover operations by restoring a clean, uninfected version of your files, applications and systems.

Industry Recognition

NuMSP is the only DRaaS solution provider that is a Gartner Leader, Visionary and Cool Vendor for disaster recovery and business continuity management.

Cloud Choice

Replicate your data to NuMSP's cloud, a private cloud, or popular third-party clouds such as Google Cloud, AWS, Azure, or IBM Bluemix.

Hybrid & Cloud Options

NuMSP Disaster Recovery supports both hybrid cloud (local appliance + cloud) and cloud-only approaches in a unified DRaaS solution.

Benefits

Eliminate Downtime And Data Loss

NuMSP Cloud Assessment will help you identify the best cloud solutions for your business.

Your Ransomware Insurance

Quickly recover from a ransomware attack without ever having to pay a ransom. See if you're a soft target for ransomware.

Unparalleled Affordability

Because we're harnessing the power and scale of the cloud, instead of expensive, on-premise infrastructure, we can equip every organization with affordable failover and data protection.
