User availability

The user availability can be managed by the admin from their profile by setting when they are available or unavailable.

The screenshot shows the 'Update User' interface for 'Nathan Test'. On the left is a navigation menu with 'Availability' selected. The main content area is divided into two sections: 'Availability' and 'Unavailability'. The 'Availability' section has a table with one entry: 'Nathan' with a 'Start Date' of 'Jan 1, 2021' and an 'End Date' of 'Jan 1, 2031'. There are buttons for 'Always Available?' and 'Add Availability'. The 'Unavailability' section has a table with one entry: 'Always Unavailable'.

Setting the user availability allows for you to use functionality such as Automatic rostering and importing group to shifts.

Admin console event form tabs

Event setup has been simplified to display forms within tabs. This should make it clearer the location of the information you need to add to create an event or shift.

The screenshot shows the 'Update Event' form for 'Run for nathan'. The 'General' tab is selected and highlighted with a red box. The form fields include: 'Name *' with the value 'Run for nathan'; 'Start Date/Time *' with the value 'Feb 01, 2021' and a clock icon for '12:00 AM'; and 'End Date/Time' with the value 'Feb 01, 2021' and a clock icon for '1:00 AM'. There is a red 'x' icon next to the end date/time field.

Note: Additional tabs can still be generated for event and shift in the attribute category tab in Organisation settings.

Event

Minimum age for event applications

There is an additional option on the Event General tab to set a minimum age to prevent any registering born by a specific date. This works alongside the account User creation age limit.
