Rakon (RAK) has posted a half year revenue of NZ\$89 million, down \$5 million on the previous year but up \$6 million on the preceding 6 months, reflecting the company's re-invigorated strategy in the Asian market.

Rakon Managing Director, Brent Robinson, said the company had been building its position in several markets and investing in its manufacturing platforms to meet anticipated growth. This has required the business to continue to carry additional costs over that period. The results in the current half year also reflected a softer than expected Telecommunications infrastructure market.

The economic situation in Europe and North America has impacted the Telecommunications market for longer than had been expected. Operator spend has been down but recent announcements, such as those from AT&T, show this is turning, as operators begin building their 4G networks.

Mr Robinson said Rakon is strongly positioned in this market and beginning to see an increase in demand. "Although recent announcements by several operators to roll out 4G networks have been later coming than the market expected, we remain in a very strong position as a preferred supplier to the leading vendors of equipment for these networks."

"These new 4G networks will incorporate both traditional macro base station equipment and small cells. This equipment and associated backhaul investment will provide significant growth for Rakon in the coming years."

Mr Robinson said SWD (smart wireless device) growth has continued strongly, which meshed well with Rakon's strategy.

During 2012, China has surpassed the US as the largest market for smartphone sales and Chinese brand names are taking an increasing share of this market.

“Rakon is a leading supplier not only to the well-recognised names but also to the leading Chinese brands. Rakon’s RCC (Rakon Crystal Chengdu) facility is operating well. Capacity will increase with the planned movement of two high volume lines from NZ and additional new capacity in the new year,” he said.

EBITDA on a look through basis including JVs and Associates for the first half was NZ\$4.7 million compared with \$6.2 million in the same period in the prior year and \$6.9 million in the last 6 months of the prior year. A bottom line Net Loss after tax of NZ\$4.0 million was recorded.

“Our manufacturing facilities in China and India are now well established which will enable us to reduce costs we have been carrying through the transition and allow us to improve earnings and continue to invest in growth.”

Recently Rakon announced a realignment of its global business, taking advantage of its scale manufacturing plants in India and China that form a vital part in the company’s long term growth strategy. This realignment will reduce global costs by NZ\$10 million per annum, with 70% of the planned changes expected to be in place by April 2013. It would also enable the NZ business to concentrate more heavily on growing its R&D activities and new product development.

Commenting upon full year guidance given to the market in August, Mr Robinson said that with the current prospects and orders being received Rakon should achieve a result within the range predicted.

Directors Declaration (NZX Listing Rules Appendix 1, 3.1 & 3.2)

The Directors declare that the consolidated financial statements on pages 3 to 15 have been prepared in compliance with applicable Financial Reporting Standards. The accounting policies the Directors consider critical to the portrayal of the company’s financial condition and results which require judgements and estimates about matters which are inherently uncertain are disclosed in note 2.17 of the financial statements for the year ended 31 March 2012.

Notes to the Unaudited Consolidated Interim Financial Statements

1. General information

Rakon Limited (“the Company”) and its subsidiaries (together “the Group”) is a world leader in the development of frequency control solutions for a wide range of applications. Rakon has leading market positions in the supply of crystal oscillators to the GPS, telecommunications network timing/synchronisation, and aerospace markets.

The Company is a limited liability company incorporated and domiciled in New Zealand. It is registered under the Companies Act 1993 and is an issuer in terms of the Securities Act 1978. The Company is listed on the New Zealand Stock Exchange. These consolidated interim financial statements have been approved for issue by the Board of Directors on 15 November 2012.

2. Summary of significant accounting policies

2.1. Basis of preparation

This condensed consolidated interim financial information for the six months ended 30 September 2012 has been prepared in accordance with NZ IAS 34, Interim Financial Statements (“NZ IAS 34”). The condensed consolidated interim financial information should be read in conjunction with the annual financial statements for the year ended 31 March 2012, which have been prepared in accordance with NZ IFRS.

2.2. Accounting policies

The accounting policies applied are consistent with those of the annual financial statements for the year ended 31 March 2012 with the addition of the following:

2.3. The Group has adopted the following new and amended IFRSs as of 1 April 2012:

NZ IFRS 7 (amendment): Financial Instruments disclosures – Transfer of Financial Assets (effective for annual periods beginning on or after 1 July 2011)

The amendments require additional disclosures about transfer of financial assets to enable users of financial statements

- To understand the relationship between transferred financial assets that are not derecognised in their entirety and the associated liabilities; and
- To evaluate the nature of, and risks associated with, the entity’s continuing involvement in derecognised financial assets.

The amendment is not expected to have a material impact on the Group or Company’s financial statements and will be adopted in the financial statements for the annual reporting period ending 31 March 2013.

FRS 44 New Zealand Additional Disclosures and Harmonisation Amendments (effective for annual periods beginning on or after 1 July 2011)

FRS 44 sets out New Zealand specific disclosures for entities that apply NZ IFRSs. These disclosures have been relocated from NZ IFRSs to clarify that these disclosures are additional to those required by IFRSs. The Harmonisation Amendments amends various NZ IFRSs for the purpose of harmonising with the source IFRSs and Australian Accounting Standards.

The new standard and amendments are not expected to have a material impact on the Group or Company’s financial statements and will be adopted in the financial statements for the annual reporting period ending 31 March 2013.

NZ IAS 1 Amendments Presentation of Items of Other Comprehensive Income (effective for annual periods beginning on or after 1 July 2012)

The amendment requires entities to separate items presented in other comprehensive income into two groups, based on whether they may be recycled to profit or loss in the future. This will not affect the measurement of any of the items recognised in the balance sheet or the profit or loss in the current period. The Group and Company expect to adopt the amendment in the financial statements for the annual reporting period ending 31 March 2014.

NZ IAS 12 Recovery of Underlying Assets (effective from 1 January 2012)

The amendment requires the measurement of deferred tax assets or liabilities to reflect the tax consequences that would follow from the way management expects to recover or settle the carrying of the relevant assets or liabilities, that is through use or through sale and introduces a rebuttable presumption that investment property which is measured at fair value is recovered entirely by sale. The amendment is not expected to have a material impact on the Group or Company’s financial statements. The Group and Company expect to adopt the amendment in the financial statements for the annual reporting period ending 31 March 2014.

3. Segment Information

The chief operating decision maker assesses the performance of the operating segments based on a measure of adjusted earnings before interest, tax, depreciation and amortisation (EBITDA look through). This EBITDA “look through” measure excludes the non-controlling interest’s share of the subsidiaries EBITDA where applicable. Interest income and expenditure are not included in the result for each operating segment that is reviewed by the chief operating decision maker. Except as noted below, other information provided to the chief operating decision maker is measured in a manner consistent with that in the financial statements.

The segment information provided to the chief operating decision maker for the reportable segments for the half year ended 30 September 2012 is as follows:

Goodwill recognised in Investment in joint venture – India (Centum Rakon)	2,937	3,345	3,085

The recoverable amount of a CGU is determined based on value-in-use calculations.

These calculations use post-tax cash flow projections based on financial budgets and models approved by the directors covering a four year period due to product life cycles and their pricing trends. The projections used in the model are based on industry forecast of continued significant growth in sales of wireless devices including smart phones and significant increases in the utilisation intensity of these devices. This growth is expected to translate into investment by operators into new network infrastructure to handle the increase in data traffic. Rakon's projection is to both benefit from the industry trend and secure an increasing share in the market for both devices and infrastructure reflecting the quality of its product range, technology advantages, manufacturing competitiveness and diversity. The actual rate of growth may differ from the projections used.

At 30 September 2012 goodwill was reviewed for indicators of impairment. The overall global economy has impacted on expected results for the CGUs during the six months under review. The economic conditions have resulted in lower than forecast investment in new network infrastructure equipment by operators and lower demand for consumer electronic products. This generally reduced the actual results below those expected for the CGUs.

Despite these factors the New Zealand CGU improved revenue and earnings compared with the comparative period in the prior year and the preceding six month period. This was achieved due to the diverse mix of this business and was due to growth in sales of consumer wireless devices. This market has continued to grow in spite of the overall economic environment.

Revenue and earnings from the United Kingdom CGU reduced when compared with the comparative period in the prior year and the preceding six month period due to the lower than forecast spending by operators on network infrastructure which is the prime market for the UK CGU.

Revenue and earnings from the French CGU were lower than the comparative period in the prior year but improved on the preceding six month period. The improvement on the preceding six month period was due to increased market share which offset the impact of lower overall spending on network infrastructure. The reduction on the comparative period in the prior year was due to the timing of sales made for high reliability space and defence applications.

Results for the India Associate CGU (Centum Rakon) were slightly above expectations and higher than the comparative period in the prior year and the preceding six month period due to improved margins and product mix.

Results for the China Associate CGU (T'Maker) were lower than predicted due to slightly lower than forecast demand and tighter margins as a consequence of lower than forecast overall demand for general consumer electronic products. The outlook for this business is for continued growth driven by overall demand and improved margins due to improvement in manufacturing operations and yield.

The Directors consider the overall assumptions for the four year period of increasing sales into smart wireless applications and network infrastructure continue to be appropriate and do not consider the results and events in the six month period under review indicate any impairment in the carrying value of goodwill at 30 September 2012. An impairment test will be performed at the year end.

13. Contingent liabilities

The Group has contingent liabilities in respect of legal claims arising in the ordinary course of business. It is not anticipated that any material liabilities will arise from the contingent liabilities.

14. Subsequent events

On 6th November 2012 Rakon announced plans to realign its global business. These plans include shifting some manufacturing activities from New Zealand to China and prioritising global project activities. Substantial cost savings will be generated as a result and there will be a loss of approximately 60 jobs in New Zealand plus a small number in other locations. No provision has been recorded in these financial results.
