The Clorox 360 Disinfectant and Sanitiser

In 2019 we invested in a specialist Clorox T360 machine. The electrostatic technology enables superior coverage of Clorox trusted disinfectants in hard to reach places — the side, underside and backside of surfaces.

Using the Clorox Total 360 has proven a vital tool in protecting our clients and has been used across our client's premises since January. In fact we've delivered around 1500 hours of Clorox cleans since the outbreak began.

The Clorox 360 system is a new, innovative measure we can provide to safely sanitise your space. The electrostatic spraying machine is eligible for use against SARS-CoV-2, the virus that causes COVID-19, based on the Environmental Protection Agency's (EPA) Emerging Viral Pathogen Policy.

To see the Clorox 360 in action visit: <https://bit.ly/35IfaYp>

EPA-approved to kill the COVID-19 virus*

Kills 99.9% of bacteria in 5 seconds

Kills cold and flu viruses, including Coronavirus (cause of the common cold), MRSA and norovirus in 2 minutes or less

Eliminates odour

Sanitises soft surfaces

Inhibits the growth of mould and mildew for up to 7 days

*SARS-CoV-2 on hard, nonporous surfaces

“The Clorox Treatment was carried out to a very high standard. Alongside the stringent deep cleaning the office felt amazingly clean on the first day back. It was a worthwhile investment and the certification gives peace of mind to Tenants and staff attending the building. I would say since the treatment the building has kept a real clean feeling this could be the extra attention to detail and work the team is carrying out but never the less we are very happy with the services received and treatments provided.”

Woburn House Conference Centre - our client since 2019

“I would like to nominate the whole White & Case Housekeeping team including management, and both the day and night teams. Without them we would never have been able to open the office back-up and make it as safe a place as possible for staff to come back and work. ... Amongst other things he has ensured that the teams were properly trained, that additional works were carried out, restructured the teams so that additional cleaning processes could be adopted, and provided us with innovative cleaning solutions such as Clorox deep cleans.”

White & Case LLP, EC2N - Client since 2019

E-Sprayer Electrostatic Sanitisation

****LIMITED TIME DEAL****

E-Sprayer

Effective against enveloped viruses which includes coronaviruses within 5 minutes when used with a disinfectant accredited to BS EN 14476

For £1162.60 +VAT you will receive:

The E-Sprayer including 1 litre tank

Additional 2 litre reservoir

Additional 3 hour battery

Watch the E-Sprayer in action here: <https://youtu.be/JBYigaBmtFo>

The E-Sprayer is a professional sprayer gun that uses the principle of electrostatic induction to distribute viricidal killing solutions effectively and evenly on surfaces.

The E-spray is very lightweight and comfortable in the hands, powered by a lithium battery that allows you to carry out sanitisation for several hours, freely around large areas, without any trailing cables. The solution is sprayed in very small and light droplets, which reach and settle on every point of the area being treated. The electrostatically charged particles are attracted to the target surface and create a sanitizing coating.

How does it work?

Electrostatic sanitisation coats the surface with a sanitising solution thoroughly, quickly and evenly. The gun provides an electrical charge to the solution. The charged molecules repel each other, so they keep an even distance from each other, but, at the same time, they are attracted to the surface that is being treated. The strength of the charged particles is greater than gravity, so they are immediately attracted by the surface. The attraction ensures that all the particles of the solution settle on the surface, thus creating a 360-degree coverage, without leaving out any areas.

Hand Sanitiser
