DON'T FALL PREY TO A RANSOMWARE ATTACK

Your data is precious. As the world moves from physical to digital, you will have more data to protect than ever. The burden on IT is constantly increasing, and you're asked to do more with less.

The National Cyber Security Alliance found that **60%** of enterprises have been hit by ransomware. Out of those who were hit, 63% were down for more than a day. We have the tools and expertise to protect your institution from these threats.

AVOID COMPLEXITY

Consolidate, integrate, assimilate and refine. The first step to avoiding an attack is using a single partner for your security needs. That way, there's no finger pointing when it comes to serving your system.

NIC PARTNERS PROVIDE:

One partner for all your security needs.

Local and cloud continuity

Iron-clad security tested against malware.

Unified customer service and support.

NIC PARTNERS

GET MORE DONE IN LESS TIME

We work to integrate products into your system designed to give you valuable time back. The days of individually acquiring and configuring servers, storage, operating systems, security and monitoring components are gone.

With NIC Partners, you can support your entire environment with one customizable UI. Our technology relies on automation that can save IT time. Plus, it is predictive and can alert you to hardware malfunctions before they happen. With this functionality, you'll be able to do more with less.

STAY AHEAD OF TRENDS

Gartner predicted that **70%** of new integration technology deployed in 2020 will have unified application and data integration within a single platform. Unified data protection provides integrated backup systems, replication and instant recovery. NIC Partners will work with you to prevent data loss and corruption. Staying ahead of trends isn't just important to us—it's necessary in order for us to provide top-of-line security.

HOW WE HELP

We partner with you to provide continuous solutions and backup for your cybersecurity needs. We reduce the need for other vendors and perform all the tasks under one roof so you never have to wonder who is responsible for what. We will join your data protection, analytics, compliance reporting, ransomware detection and DR automation for a single site, cloud or unlimited remote sites.
