

NIC PARTNERS
Technology & Security Experts

CASE STUDY:

FONTANA UNIFIED SCHOOL DISTRICT

For the last three years, NIC Partners has acted as FUSD's go-to partner for a variety of technology implementations. FUSD is a school district with approximately 42,000 students and 44 schools. It's one of the largest school districts in Southern California, providing education to students in a diverse urban/suburban environment.

The district operates its own Special Education Local Plan Area (SELPA) and serves many students who must overcome severe physical challenges, which means implementing adaptive technologies and software.

NIC PARTNER'S ROLE

PHYSICAL SECURITY

Goal: Implement video surveillance district wide.

Estimated cost: \$1.1M

In order to implement effective video surveillance across FUSD, NIC Partners installed approximately 300 IP cameras throughout the district. This included mounting all hardware, configuring cameras individually and installing the necessary cables and power for each.

After successful implementation, NIC Partners continued to provide maintenance to support the entire video surveillance solution.

DISTRICT NETWORK UPGRADES

Goal: Upgrade FUSD's existing Cisco hardware and network cabling

Estimated cost: \$10M

During this project, NIC Partners worked with FUSD to discover which Cisco products would integrate best with their existing systems and needs. Once they were identified and agreed upon, NIC Partners installed the new devices and network cabling in 20 elementary schools and one high school.

JURUPA HILLS HIGH SCHOOL

Goal: Design a network system for a new high school.

Estimated cost: \$1.2M

When FUSD was planning to construct a new high school, they asked NIC Partners to help design and implement a network system for the new campus. This meant building out physical security, Cisco network security and AMP network cabling for approximately 2,600 drops throughout the campus.
