Xray-Functionize integration

Exceed your automation goals with a modern AI/ML approach for testing with the Xray-Functionize integration. Tests self-heal to keep up with changes and can run at scale in the Functionize Test Cloud. Fixing fewer tests and maintaining less infrastructure means you can release software faster. When Functionize results are pushed into Xray, you increase transparency for automation and seamlessly integrate automation into your agile Jira workflows.

The Xray-Functionize integration equips modern testing teams to accelerate automation and increase transparency. Easily create automated tests using Architect — no code required and link Functionize automated tests with Xray manual tests. Then, create and run orchestrations in Functionize. Results are passed into Xray, which provides a centralized location to view manual and automated testing activities.

"Modernizing test automation with the use of AI/ML allows enterprise companies to dramatically speed up releases, maximize the visibility of test results and allow teams to make smarter decisions together."

Xray is a cutting-edge test management solution that uses Jira native issue-types so users can plan, organize and execute all of their testing activities from Jira.

Functionize is an intelligent test automation platform that uses AI/ML to accelerate releases by reducing the time to create, execute, and maintain tests.

XRAY + functionize

The Benefits

Rapidly create automated tests. Tests take minutes to create using Architect, the test automation tool from Functionize - no code required. Build complex end-to-end tests to test the UI, API, databases, file exports, 2FA, and more.

Self-healing tests powered by AI. Machine learning uses big data to learn from your application. This allows tests to keep up with UI changes and self heal with 99.9% accuracy. Fewer broken tests means reduced test maintenance hours and more automated tests.

Increase visibility. Unlimited access to Functionize maximizes visibility for your teams to dig into automated test details. Easily see linked information from both tools and jump back and forth between them.

Comprehensive reporting. Leverage reporting capabilities with Xray's test coverage and traceability reports. Get full visibility of automated test results and ensure all requirements are met within Jira.

Reduce infrastructure overhead. The Functionize Test Cloud equips teams to run thousands of functional and visual tests from any geography, eliminating the need for teams to build and maintain their own testing infrastructure.

About Xray

Xray is the leading Quality Assurance and Test Management app for Jira.
It's a full-featured tool that lives inside and seamlessly integrates with Jira. Xray supports both manual and automated tests and provides powerful reports to ensure full requirements coverage that improve the quality of your systems through effective and efficient testing. Xray is a mission-critical tool at over 5,000 companies in 70+ countries, including 137 of the Global 500.
