School districts across the nation are dealing with unprecedented change. How do you teach our students remotely and keep all those important communication channels between staff, teachers and administrators open?

Your current technology makes that challenge

IMPOSSIBLE.

You ultimately have three options-

- Do nothing and let district communication suffer

- Invest in new hardware that takes time to deploy

- Invest in cloud technology & save the school year

At Converged Technology Professionals, we've worked with school districts across the nation to upgrade their phone systems to a modern, cloud-based solution that solves all their communication needs.

Cloud-based communication provides

- Fast & reliable communications
- Full mobile/tablet/PC integration
- IM, text, voice chat & video calling
- Easy faxing & file sharing
- Excellent privacy & security

We are a RingCentral Preferred Partner meaning that we have extensive resources to ensure your exact needs are met. Our team can save you time & money with decades of combined experience.

CLOUD COMMUNICATIONS IS CONFIGURED FOR REMOTE USERS AT SCALE

Your PBX phone system is not designed for today's remote work environment, which presents your IT department with quite a challenge. Integrating modern tablets, smartphones and laptops into your network securely is almost impossible.

A modern cloud solution like RingCentral lets users connect through an internet connection on their preferred device. Every interaction is safe and secure, giving you unlimited room to quickly scale.

Your school district can use RingCentral to:

- Answer/make secure phone calls
- Transfer calls to other parties
- IM, text, voice chat and video calls
- Schedule conference calls & use screen sharing
- Fax, send documents & lots more

CLOUD COMMUNICATIONS DON'T REQUIRE LARGE HARDWARE INVESTMENTS

Your current phone system uses routers, switches and other outdated technology to deliver internal calls to landlines. It's costly and time consuming for your IT department- despite not working at all for a remote-first environment.

Cloud-based communication means your employees bring their own devices (BYOD) and decide how they'd prefer to collaborate...at home, in the office or on the go. The cost savings is substantial and onboarding is a true breeze.

REASON
#3

CLOUD TECHNOLOGY IS
100% FUTURE-PROOF

PBX systems have to constantly evolve with new licensing agreements, hardware and additional tie-ins just to stay somewhat operational.

That's clearly not ideal.

RingCentral®

RingCentral works independently in the cloud, with new features rolling out regularly to keep you at the forefront of communications technology. It's ideal for today, tomorrow and years after that.

REASON

#4

CLOUD COMMUNICATION IS IDEAL FOR COLLABORATING

Meaningful parent/teacher conferences. Collaborating with administrators & the district office.

These are tasks that should be easy in a remote environment... but they just aren't.

Cloud-based communications eliminates all these headaches and streamlines district collaboration- it keeps everyone connnected on a single platform

A SINGLE UNIFIED PLATFORM SIMPLIFIES IT MANAGEMENT

Your current PBX phone system requires multiple applications to get the job done and forces your IT administrators to work with multiple vendors. This process is confusing, expensive, and highly inefficient.

With cloud communications, all features are unified into a single cloud-based app. That means simplified management by your IT department and an intuitive, streamlined process for end users.

With a single unified platform, it's a huge win for everyone across your entire school district.

USER SECURITY & PRIVACY ACHIEVED WITH CLOUD COMMUNICATIONS

As you know, teacher unions are big on not sharing teachers' personal info with parents or students. Yet that may feel unavoidable in our "new normal" of working remotely. That makes choosing the right communications technology even more critical- there's no room for error when it comes to privacy & security.

The RingCentral platform allows users to communicate with parents, students or coworkers using school district phone numbers even while calling on their personal mobile devices. This feature eliminates personal privacy concerns completely.

RingCentral's platform is also HITRUST certified, meaning they meet the industry's highest security protocols for protecting your communications. This lets teachers and staff call, video chat, text and more in a completely secure environment.

TRAINING AT SCALE IS EASY WITH CLOUD TECHNOLOGIES

Expecting every staff member within your school district to become tech-savvy overnight is not an achievable goal. That's why you must have a solution that can be implemented quickly and easily managed by your IT administrative staff.

As a RingCentral Preferred Partner, we have extensive resources to provide administrative and end-user training directly to your staff. Our certified, highly trained implementation and support teams streamline the training process to get your district running smoothly in no time.

Additionally, we work with your IT team to provide consultation on all other communication concerns you may have. Our mission is to make sure you are equipped with the PERFECT solution that meets the needs for your school district that aligns with all current & future goals.
